

## Centrifugal Oil Cleaners

The centrifugal product range available at Sterling Filtration Ltd provides high performance filtration solutions for partial-flow oil. The centrifuge efficiently separates dirt particles such as soot and abrasive particles in lube oils. This technology is also suitable for gearboxes, hydraulic systems and other industrial applications.

Advantages of using a centrifuge:

- Improved purity of the oil
- Extended oil service life & longer service intervals
- Reduced engine wear
- Preventative engine protection
- Reduced maintenance and disposal costs
- Less engine down-time
- Maximum availability for vehicles, engines and machinery.
- Improved combustion process and reduced fuel consumption
- Supports systems to minimise exhaust emissions (e.g. exhaust gas recirculation)
- They are an investment that quickly pays for itself
