

Compressed Air

Above: Compressed Air Cartridges

Sterling Filtration Ltd can offer compressed air filter elements for a number of manufacturers including Atlas Copco, Compair, Domnick Hunter, Ingersoll Rand, Ultrafilter, Deltech, Hiross, OMI and Zander.

Our sourcing range offers in-line housings and elements for use in a variety of industries; auto, medical and textile. Our replacement elements include pre-filtering, general purpose, oil removal and activated carbon. These range between 5 and 0.01 micron filtration, depending on the requirements specified by the original manufacturer.

Our inline filter elements are made of borosilicate glass microfibre media that helps in removing solids, liquids, oil vapour and odour. Special impregnated open cell foam acts as an oil retainment barrier.

Our inline filter elements are designed to provide optimal performance while reducing maintenance time. Replacing compressor parts on a consistent basis will help ensure premium air quality in your compressed air system.
