

Torit™ Dust Control Cartridges.

Donaldson filters keep dust collectors operating at peak performance. Offered for a full range of dust, fume and mist collection applications, Donaldson filters – especially their patented Ultra-Web® filters - outperform and outlast competitors filters. When it comes to Donaldson Ultra-Web® filters, there is no equal on the market. The Donaldson Ultra-Web® filters offer high performance, increased efficiency, longer filter life and in turn greater value.

The Donaldson Torit™ elements are ideal for use in your Mist Collectors, Environmental Control Booths and Dust Collector filter assemblies.

Donaldson has pioneering filter cartridge media technology that has seen it become the world leader in air filtration over the past 90 years with innovations like Ultra-Web® and its nanofibre filter media. Using generic equivalent filters can be an expensive proposition. Will-fit filter cartridges don't last as long and must be replaced more often. That means buying and replacing more filters, more often – giving you greater overall costs over time.

The nanofibre media offers: Increased surface loading, captures sub-micron contaminants, enhances dust cake release, provides better cleaning efficiency, lowers cost per cubic metre per hour of air (m³/h) and lowers energy costs.

Sterling Filtration Ltd can offer you Donaldson Torit elements from stock. The entire Donaldson Torit range is available upon request.
